

Dear  
HUMANITY,

...

...MOTHER  
NATURE  
is  
warning us...

The top 5 warmest years on record are all within the last decade; 'once a century' class storms are happening weeks apart; the 6th largest mass extinction of plant and animal life is in full swing

- something is wrong

# ...time is running OUT...

The planet's average surface temperature has risen by about 0.9° C (1.62 °F) since the late 19th century. This may sound small but glaciers are retreating almost everywhere around the world — including the Alps, Himalayas, Andes, Rockies, Alaska and Africa and desertification is rapidly increasing.

Most of the warming occurred in the past 35 years

...you cant  
COMB OVER  
climate  
change!!!

*"When the last tree has been cut down,  
the last fish caught,  
the last river poisoned,  
only then will we realize that one cannot eat money."  
- unknown*

*“When the last tree has been cut down,  
the last fish caught,  
the last river poisoned,  
only then will we realize that one cannot eat money.”  
- unknown*

...we CAN'T  
go on like this...

Fueled by the promise of profits and economic growth,  
the driving force behind anthropological climate  
change is 'Big Business' and capitalism.  
Governments, and the powerful business owners that  
fund them do their part to keep raking profits at the cost of  
the Earth, all the while pushing the narrative that it is the  
general population that needs to make the biggest sacrifices  
or denying climate change altogether.  
Agriculture, Electricity production,  
Industry, and Commerce and Residence -  
greatest contributors to emissions (in  
descending order).

...time is  
...ing  
...
