The following thoughts regarding
 The acquisition, commissioning and naming Of
 Occurred and were inscribed Throughout the morning hours, Immediately preceding
 the moment At which the craft was lowered Into her design destined REALIZATION
 At midday July 31, 1948 | She who was burned more than half her body skipped
 out of death Observing that there are five solid figures, the Master concluded that the
 Sphere of the Universe arose from the dodecahedron | using bobby pins, clothpins, all
 sorts of units from the five-and-ten-cent store to make geometric, mobile constructions,
 collapsing an ingeniously fashioned icosahedron by twisting it and doubling and tripling

the modules down to a tetrahedron;
 talking about the obsolescence of the square, the cube,
 the numbers two and ten; extolling the numbers nine and three, the circle, the triangle,
 the tetrahedron, and the sphere | "Ah," he said affectionately, "here's our old friend,
 the hypotenuse." | Going from micro to macro, each more inclusive aspect of Universe
 is unpredicted by any of its respective subparts taken separately. Universe is a synergy
 of synergies. It is a corollary of synergy that the known behavior of wholes plus the

is an ideal and constant angle which, for leaves and branches on a stem, produces the maximum exposition to light, that light vertical, fruit blossoms the briar rose the

Those involved with the project stood on a bluff with umbrellas and raincoats and watched those below roll out miles of colored aluminum and run about in the rain inserting bolts where he had calculated holes should be punched | —but as we had have discovered the coordinate system employed by nature itself | —but as we had only half the tensile strength needed, we all knew the dome would not go up.

which follows from
too many having too little knowledge |

you got the feeling it wanted to go up, but it was limpid and settled down like a pneumatic bag that had little air in it. | It is only at the moment of humans' realistic admission to themselves of having made a mistake that they are closest to that mysterious integrity governing Universe. | by shipwreck, he perished the first to publish (write down divulge) the secret, the construction of, from 12 pentagons, the sphere "Thus was he punished for his impiety" | that that which has been found out by work may, by work, be passed on (without due loss of force) for use USE

"Let's put it together anyhow," he said.
"One never knows the ways of the Almighty." |
