with the development of expert systems about thirty years ago. It continued with the research and applications of artificial neural nets, constraint solving and intelligent agents. It includes even more specific areas like robotics, natural language understanding, etc. Many useful and quite intelligent methods of data processing have been developed in AI during the years. A number of them have become widely used, like various search methods, planning, constraint solving and optimization methods. This thesis book focuses more on the latter part.

cyberpunk:
Cyberpunk is a subgenre of science fiction in a dystopian futuristic setting that tends to focus on a "combination of low-life and high tech" featuring advanced technological and scientific achievements, such as artificial intelligence and cybernetics, juxtaposed with a degree of breakdown or radical change in the social order.

dystopian:
A dystopia is a community or society that is undesirable or frightening. People are worried about in the future, AI will become our human's threat and bring about new moral issues.

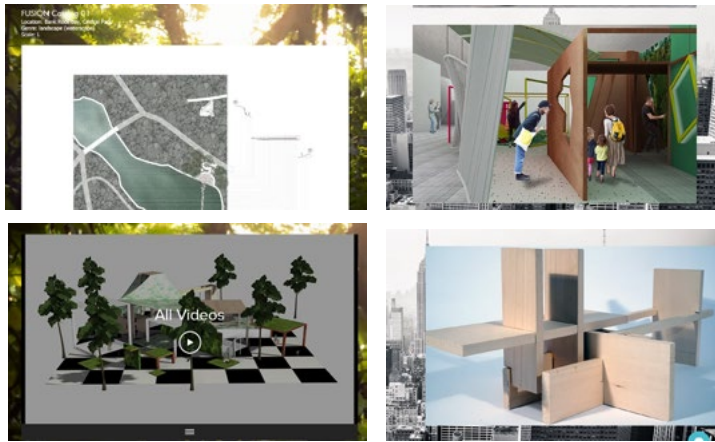

Central Park:
Olmsted's Central Park marks a great step in modern landscape design. However, as an artificial landscape, it requires frequent maintenance to make up its low self-control ability.

climate change:
This is a heated discussion issue that matches the dystopian prediction in some Sci-fi movies. E.g. In the past few years, some wildlife documentaries have shown evidence of global warming in the
