

HISTORY OF A FELLING

HISTORY OF A FELLING

In 1846, the United States and Great Britain signed the Oregon Treaty to make the 49th Parallel the boundary between the United States and British North America, later known as Canada. The two countries formed the International Boundary Commission to survey and establish what is now Washington State's northern border with British Columbia. Starting at Point Roberts and working east by clear-cutting a six-foot wide swath through the rugged, previously uncolonized forest. By 1860, a preliminary line running from the Pacific Ocean east to the summit of Mount Rainier had been established. It would take another 13 years to reach the 7,535 miles in total separating the western parks and national reserves, including the Northern Cascade National Park and the Wenatchee Glacier.

The International Power Park, covering common ecological and wooded landscapes strongly because they resemble this polished desert.

THE A FELLING: one that was made during the winter of 1904 while on the way to the mountains in the Pacific Northwest. The map shows the route taken by the surveyors in the early days of the project. The map also shows the location of the park and the glacier. The map is a historical document and is a valuable resource for researchers and historians.

HISTORY OF A FELLING

In 1846, the United States and Great Britain signed the Oregon Treaty to make the 49th Parallel the boundary between the United States and British North America, later known as Canada. The two countries formed the International Boundary Commission to survey and establish what is now Washington State's northern border with British Columbia. Starting at Point Roberts and working east by clear-cutting a 30-foot-wide swath through the rugged, previously undeveloped forest. By 1890, a political line running from the Pacific Ocean east to the summit of Mount Rainier had been established. It would take another 13 years to clear the 1,535 miles in total separating the two nations' parks and national forests, including the Northern Cascade National Park and the Wenatchee Glacier. International Power Park, covering common ecological and watershed landscapes, strongly became their agenda this political divide.

IT'S A FELLING: One day in 1904, during the winter of 1904 while on the job, the surveyors, including the American, began to make their way through the forest, clearing the way for the boundary line. The line was to be a 30-foot-wide swath, and the surveyors were to clear the way for it. The line was to be a 30-foot-wide swath, and the surveyors were to clear the way for it. The line was to be a 30-foot-wide swath, and the surveyors were to clear the way for it.
